Subject: RE: Air Monitoring and wrapping up site work - Neuhauser Landfill

Hi Patrick – Thank you for sending the schedule. I also received your data today and hopefully will have a chance to review it tomorrow.

For air monitoring, I think it is acceptable to cease the SUMMA sampling. I don't recall if the Work Plan had any specifics for final samples, so please check that.

Thanks!

Joyce

Subject: Air Monitoring and wrapping up site work - Neuhauser Landfill

Joyce,

We are starting to wrap up the site. Our upcoming schedule is as follows:

- All roll-offs bins are offsite except for two that contain soil bound for Kimball. These are planned for shipment offsite tomorrow (Thursday)
- All remaining impacted stockpiles were removed from the site last week.
- Stockpiles used for backfill have been placed into excavations
- Frac Tank 1 has been emptied except for the sludge/sediment that will be cleaned out and taken to Kimball on Tuesday.
- Frac Tank 2 is mostly empty. We plan to have water removed by Friday so that it is ready for cleaning on Tuesday.
- Frac Tank 3 is awaiting analytical results. They are due to arrive tomorrow. I will send them along as soon as I can (I am in MSHA training all day, but will check emails at breaks). Ideally we can deal with the contents Friday so it too can be cleaned Tuesday.
- All frac tanks (except maybe 3) are planned to go offsite Wednesday.
- ACT/PSC is going to be dealing with housekeeping items throughout this time

In terms of air monitoring, when is it acceptable to EPA to finish Summa canister sampling along the perimeter of the site? We currently have unused canisters that will last through next Wednesday, and I am trying to determine if more need to be ordered.

Thanks!
Patrick
